EBS - Volume types

EBS Volume Types, marranic Stander

EBS Volumes come in 6 types

gp2 / gp3 (SSD): General purpose SSD volume that balances price and performance for a wide variety of workloads

io I / io2 (SSD): Highest-performance SSD volume for mission-critical low-latency or high-throughput workloads

• st I (HDD): Low cost HDD volume designed for frequently accessed, throughputintensive workloads

scl (HDD): Lowest cost HDD volume designed for less frequently accessed workloads

- EBS Volumes are characterized in Size | Throughput | IOPS (I/O Ops Per Sec)
- When in doubt always consult the AWS documentation it's good!

Only gp2/gp3 and io1/io2 can be used as boot volumes.

EBS Volume Types Use cases

General Purpose SSD

• Cost effective storage, low-latency

- System boot volumes, Virtual desktops, Development and test environments
- GiB 16TiB
- gp3:
 - Baseline of 3,000 IOPS and throughput of 125 MiB/s
 - Can increase IOPS up to 16,000 and throughput up to 1000 MiB/s independently
- - Small gp2 volumes can burst IOPS to 3,000
 - Size of the volume and IOPS are linked, max IOPS is 16,000
 - 3 IOPS per GB, means at 5,334 GB we are at the max IOPS

EBS Volume Types Use cases

DPS)(PIOPS) SSD

Critical business applications with sustained IOPS performance

- Or applications that need more than 16,000 IOPS
- Freat for databases workloads (sensitive to storage perf and consistency)
- io I/io2 (4 GiB 16 TiB):
 - Max PIOPS: 64,000 for Nitro EC2 instances & 32,000 for other
 - Can increase PIOPS independently from storage size
 - io2 have more durability and more IOPS per GiB (at the same price as io1)

o2 Block Express (4 GiB – 64 TiB):

- Sub-millisecond latency
- Max PIOPS: 256,000 with an IOPS:GiB ratio of 1,000:1

Supports EBS Multi-attach

EBS Volume Types Use cases

Hard Disk Drives (HDD)

- Cannot be a boot volume
- 125 MiB to 16 TiB
- Throughput Optimized HDD (st1)
 - Big Data, Data Warehouses, Log Processing
 - Max throughput 500 MiB/s max IOPS 500

Cold HDD (sc1):

- For data that is infrequently accessed
- Scenarios where lowest cost is important

• Max throughput 250 MiB/s - max IOPS 250
